Spring Hill, TN 37174

Spring Hill's streams are one of our Cities most valuable assets. We are located in what is known as the Duck River Watershed. Our blue line streams are home to a tremendous diversity of wildlife and vegetation found nowhere else in the world. There are several streams within the city limits, McCutcheon Creek, Grassy Branch, Crooked Creek, Rutherford Creek, Walden Branch, McCormack Creek, Aeon Creek, and the West Fork of Aeon Creek. The first four on this list are on the states 303d endangered list due to land development, municipal pollution and agriculture. Total there are approximately 25 miles of streams that travel through and around our subdivisions. As citizens we are stewards of these streams. The City encourages all businesses, civic and or religious organizations and citizens to adopt a stream, street or subdivision. Keeping trash and other pollution out of our blue line streams benefits us all by keeping the environment clean and helps reduce the cost of water treatment. It also makes our neighborhoods more attractive and helps protect property values. It may also help reduce crime. Good habits set the example for our young people to follow and will help ensure we preserve their future as well. Additionally these type of organized events help instill a sense of community ownership with the individuals that help organize and participate. Please support your City and your fellow neighbors by adopting a stream, street or subdivision. Contact your MS4 Department for more details.
